## Concrete to Composite: Florida Based Water Treatment Facility Turns to Fibrelite for Composite Trench Access Panels

Concrete to Composites

### Advanced Design – Bigger Advantages

Fibrelite is the world leading manufacturer of Fiberglass Reinforced Plastic (FRP) composite manhole covers and trench panels. This sophisticated and highly specialized material is fast becoming recognized as the more effective modern alternative to traditional materials such as heavy steel and concrete.

Though metal covers were considered as a replacement, the following benefits meant Fibrelite's FRP composite covers were chosen:

- Lightweight for easy and safe manual removal
- Non-slip properties equivalent to a high grade road
- Chemically inert & corrosion resistant
- Extremely strong and durable

Lightweight composite trench covers

Traditional concrete panels are unsafe and labor intensive to remove and often break apart over time

Perfect alternative to concrete
